WAVE Web Accessibility Evaluation Tool

- Free accessibility audits
 - Visual issue identification
-

AI Agents That Can Audit Entire Websites

ChatGPT

- Analyze pages, screenshots, analytics exports, and crawl reports
- Generate SEO, UX, CRO, accessibility, and content recommendations

Claude

- Long-form website audit reports
- Excellent for reviewing large site exports

Gemini

- Website analysis with search integration
 - Competitive research support
-

Recommended Stack

For a professional audit:

1. **Technical SEO:** [Semrush](#) or [Ahrefs](#)
2. **Performance:** [PageSpeed Insights](#) + [GTmetrix](#)
3. **UX:** [Hotjar](#) or [Microsoft Clarity](#)
4. **Content:** [Surfer SEO](#)
5. **AI Review:** Upload findings into [ChatGPT](#) or [Claude](#) for prioritization and action plans.

If you share your website URL and what you want to audit (SEO, speed, security, accessibility, UX, conversions, or all of them), I can suggest the best tool stack for your specific case.

I have claude pro subscription

Since you already have **Claude Pro**, I'd start by getting more value out of Claude before paying for another AI audit platform.

Best setup with Claude Pro

1. Claude + SEO Audit Skill

The dedicated Claude SEO skill can crawl a site, evaluate SEO, GEO (AI search optimization), and AEO (answer engine optimization), then generate a report with prioritized fixes. It supports both quick audits and full-site crawls.  [Claude SEO Skill](#)

Good prompt:

Audit <https://yourdomain.com>

Analyze:

- Technical SEO
- Core Web Vitals
- Crawlability
- Internal linking
- Schema markup
- GEO (ChatGPT/Claude visibility)
- AEO (Answer Engine Optimization)
- Conversion optimization
- EEAT signals

Prioritize findings:

Critical
High
Medium
Low

For each issue provide:

- Why it matters
- Exact fix
- Expected impact

2. Claude + Ahrefs (my favorite combo)

Many SEO professionals are using Claude with data exports from Ahrefs because Claude is excellent at prioritizing issues instead of just listing them. Community reports show strong results when combining live SEO data with Claude's analysis.  [Reddit](#)

Workflow:

1. Crawl site with Ahrefs/Semrush
2. Export issues to CSV
3. Upload to Claude
4. Ask Claude to:
 - group issues
 - estimate impact
 - create implementation roadmap
 - generate tickets for developers

3. Claude Code + SquirrelScan

If you're technical or have access to the codebase, SquirrelScan is built specifically for Claude Code and can run SEO, performance, and security audits with hundreds of checks.  [squirrelscan](#)

Best for:

- Next.js
- React
- SaaS websites
- Agency workflows

AI Visibility Audits (important in 2026)

Traditional SEO is no longer enough.

If your goal is getting cited by ChatGPT, Claude, Gemini, and Perplexity, consider:

- [Visus](#) — AI visibility scoring and recommendations.  [Visus](#)
- [AI Crawl Check](#) — checks AI crawler access, robots.txt, schema, and AI-search readiness.  [aicrawlcheck.com](#)
- [Lightmark AI](#) — evaluates how AI crawlers see your site.  [Lightmark AI](#)

If you're an agency

A strong audit stack would be:

Area	Tool
Technical SEO	Ahrefs or Semrush
AI Visibility	Visus

Area	Tool
Performance	PageSpeed + GTmetrix
Security	OffURL or ClearAudit
Final Analysis	Claude Pro

This combination gives you a professional-grade audit without buying another expensive AI subscription. [Offurl+1](#)

If you share your website URL, I can help create a **Claude prompt that performs a 50+ point audit checklist** tailored to your site type (local business, SaaS, e-commerce, agency, blog, etc.).
